### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Denis Maloney on 12 August 2009.

The application has been amended as follows:

14. A method of auctioning financial products over a distributed, networked computer system, said method comprising:

receiving orders for financial products into the distributed, networked computer system by specifying in the order a price for the financial product, a quantity of the financial product and exposure time which the order can remain active;

receiving responses to orders for the product by said distributed networked computer system, said responses specifying a price and quantity with at least some of the responses specifying the price as a relative price with a price improvement with the relative price being relative to a generally accepted indicator of a prevailing current market price for the product; and for a first one of said orders:

matching in a computer in the distributed, networked computer system said first order to the responses and contra-side orders, during an interval determined by the exposure time specified by said first order, with a first one of the responses or contra side orders that meets the conditions specified by the order terminating the auction; and

expiring by the computer in the distributed networked computer system the first one of the orders if no matching responses or contra-side orders are received during the exposure period.

33. A system for auctioning financial products over a distributed, networked computer system, said system comprising:

a plurality of workstations for entering orders for financial products into the distributed, networked computer system by specifying in the order a quantity of the financial product and an exposure time for which the order is displayed for responses;

plurality of workstations for entering responses to orders for the product, said responses specifying a price and quantity with at least some of the responses specifying the price as a relative price with a price improvement with the relative price being relative to a generally accepted indicator of a prevailing current market price for the product;

a server computer coupled to the workstations for entering the orders and the responses, said server computer executing a server process, [that] said server process comprising software to:

for a first one of said orders determines a match to said first order with the responses and contra-side orders during the exposure time specified by said first order.

### ***Reasons For Allowance***

2. The following is an examiner's statement of reasons for allowance:
3. The present invention is directed to a method of auctioning financial products over a distributed, networked computer system. The method includes receiving orders for financial products, receiving responses to the orders with at least some of the responses specifying the price as a relative price with a price improvement with the relative price being relative to a generally accepted indicator of a prevailing current market price for the product, matching to the responses and contra-side orders, and expiring the first one of the orders if no matching responses or contra-side orders are received during the exposure period. The use of books in an order matching system is old and well known (see Silverman Figure 4).

4. The closest prior art of Silverman describes a system for anonymously matching buy and sell events based on price, quantity, and credit (Silverman 1:19-26). Silverman discloses that each order carries a time constraint that either removes an order from the system if it is not filled by a certain time or maintains an order in the system until it is cancelled (Silverman 21:5-15). Silverman's system further attempts to find matches between a new entry in the system and other bids and offers posted in the system book between the potential counterparties to a potential matching transaction and executing a trade automatically if such a match is found (Silverman 7:5-20). However, with regard to claims 1, 14, 24, 33, 40, 55, 64 and 71, the prior art fails to teach or reasonably suggest singly or in combination (see BPAI Decision on Appeal, pages 16 and 17) "...receiving responses to orders for the product by said distributed networked computer system, *said responses specifying a price and quantity with at least some of the responses specifying the price as a relative price with a price improvement with the relative price being relative to a generally accepted indicator of a prevailing current market price for the product...*"

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
